## Decisions in Wifts Assembly Language

https://powcoder.com

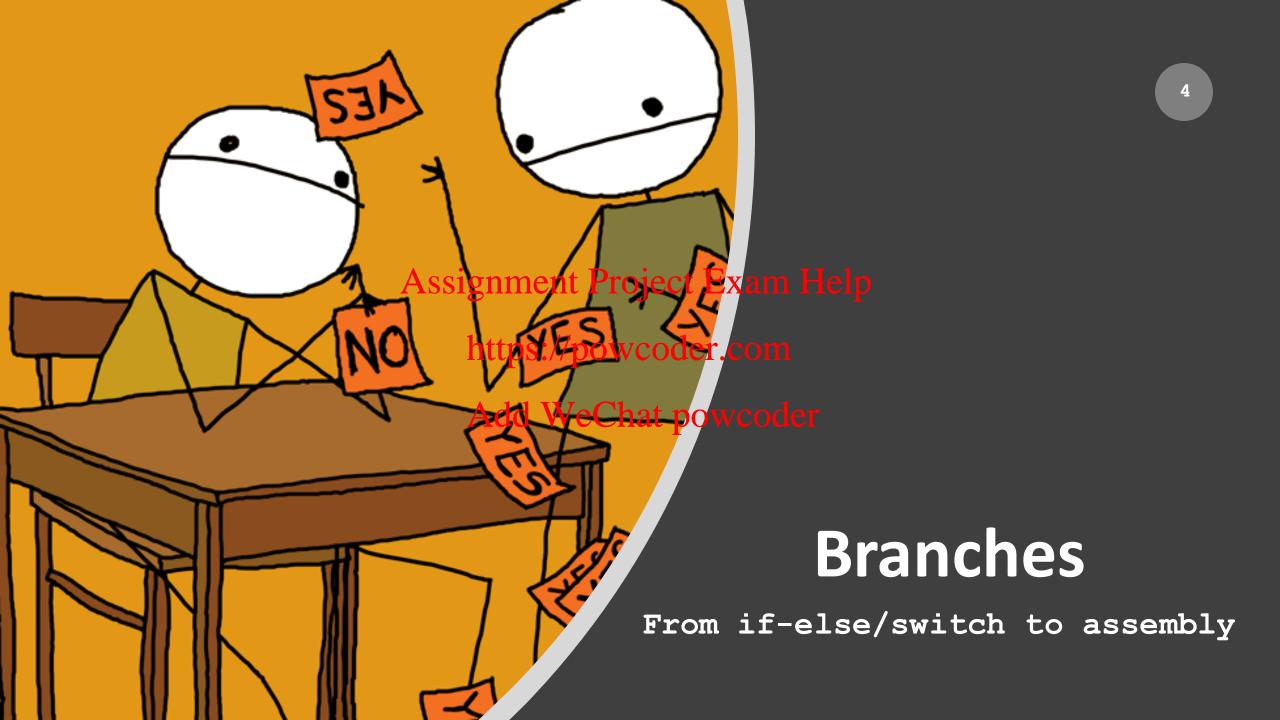

Add WeChat powcoder

## Decisions in High-Level Languages

- Conditional Statements: if, if-else, switch
- Loops: while, do while for Exam Help
- Equality and Inequalities: == != < > <= >= https://powcoder.com

Add WeChat powcoder

#### Conditional Statement in HLL

```
if-else in C/Java
   (condition) clause
                                // C: Rewrite with goto
   (condition)
                 Assignment Project Exam Help goto L1
  clause1
                     https://powcoder.com/se2
else
  clause2
                                L2:
```

Same meaning in C No goto in Java

#### Conditional Branches in MIPS

Branch if (registers are) equal: beq reg1, reg2, label

```
// C
if (reg1 == reg2\hssignment Project Exam Help11 if $s1 == $s2
goto label1;

https://powcoder.com\$s2 label1
```

```
// C
if (reg1 != reg2)
goto label1;

# MIPS
# go to label1 if $s1 != $s2
bne $s1 $s2 label1
```

#### **Unconditional Branch**

• Jump Instruction: Jump directly to a label

```
// C goto Assignment Project Exam Helpump
goto label;
https://powcoder.com
```

#### Add WeChat powcoder

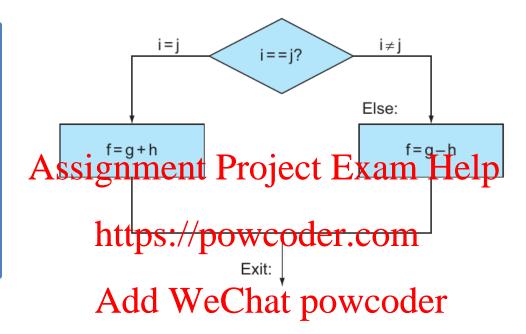

Technically, the following instruction is the same.

There is an important difference. We will see in MIPS representation!

```
# beq version
beq $0, $0, label
```

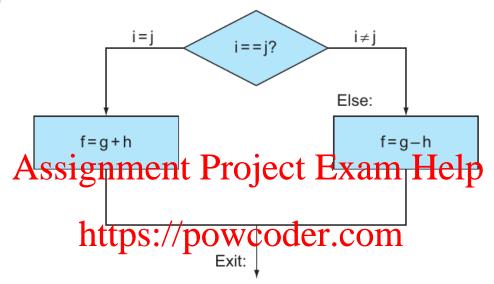

### **Conditional Statement in HLL**

```
// C and Java
if ( i == j ) {
    f = g + h;
} else {
    f = g - h;
}
```

## Compiling if-else into MIPS

```
// C and Java
if ( i == j ) {
    f = g + h;
} else {
    f = g - h;
}
```

compiler automatically creates labels to handle decisions (branches).

#### Registers

\$s0	f
\$s1	g
\$s2	h
\$s3	i
\$s4	j

```
# MIP dd WeChat powcoder
```

```
beq $s3 $s4 True  # branch i == j
sub $s0, $s1, $s2 # f = g - h (false)
j Exit  # jump to Exit
True: add $s0, $s1, $s2 # f = g + h (true)
Exit:
```

#### The Switch Statement in HLL

Choose among four alternatives depending on whether share Project Exam Help: f=i+j; break; the value 0, 1, 2 or 3.

```
Switch Statement
             switch
                    (k)
               case 1: f=g+h; break;
https://powcoder.comse 2: f=g-h; break;
               case 3: f=i-j; break;
```

```
Rewrite it with if-else Chat powcoder
        (k==0) f = i + j;
else if (k==1) f = q + h;
else if (k==2) f = g - h;
else if (k==3) f = i - j;
```

## Loops in C and Assembly

HLL has three types of Assignment Project Exam Help loops: while, do-while, for. Each can be rewritten asttps://bowseder.com

Add WeChat powcoder

MIPS: There are multiple ways to write a loop with conditional branch

## Loops in HHL: 3 ways

```
Example: Sum of Series
sum = 1 + 2 + 3 + 4 + 5
```

```
// while
int i = 1;
int N = 5;
int sum = 0;
while (i \le N)
  sum += i ;
  i++ ;
```

```
Assignment Project Exam Help
 https://powcoder.com
 in Add WeChat powcoder
 for (i=1 ; i<=N ; i++)</pre>
   sum += i ;
```

```
// do-while
int i = 1;
int N = 5;
int sum = 0;
do {
  sum += i ;
  <u>i++</u>;
 while (i \le N);
```

## From do-while to goto

```
Example: Sum of Series
sum = 1 + 2 + 3 + 4 + 5
                                      int i = 1;
                   Assignment Project Exam Help ;
                                      int sum = 0;
                       https://powcoder.com
                       Add WeChat poweodeite it with goto in C
 // do-while loop in C
                            do-while to goto
                                      Loop: sum = sum + i;
 do
                                             i = i + 1;
   sum = sum + i ;
                                        goto Loop ;
```

## From do-while to MIPS assembly

```
// do-while loop in C
do {
    sum = sum + Assignment Project Exam Help
    i = i + 1;
} while ( i != N ) https://powcoder.comgoto Loop;
// Rewrite it with goto in C
Loop: sum = sum + i;

the sum Help
if ( i != N )

younger

congoto Loop;
```

Add WeChat powcoder

```
Registers

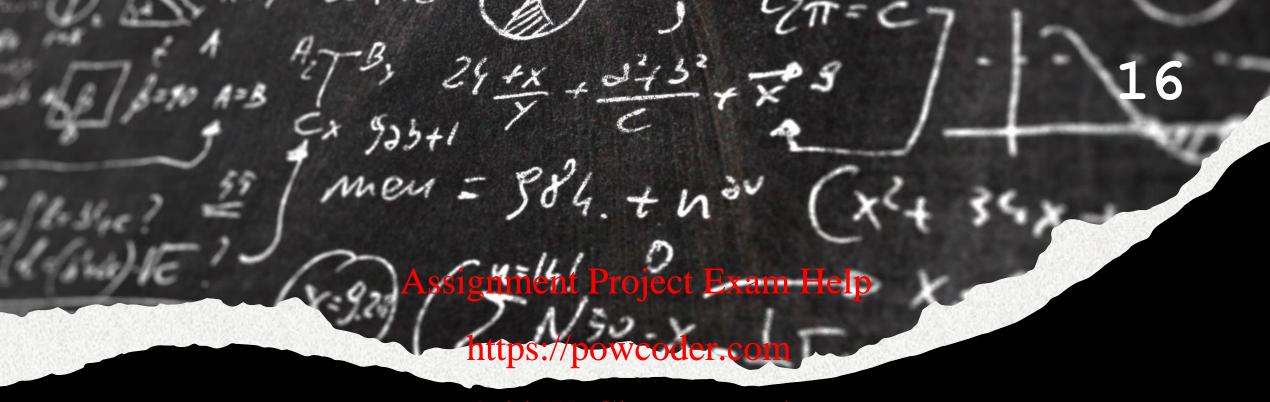

$s1 i
$s2 N
$s3 sum
```

```
# MIPS code

Loop: add $s3, $s3, $s1 # sum = sum + i

addi $s1, $s1, 1 # i = i + 1

bne $s1, $s2, Loop # go to Loop if i != N
```

Add WeChat powcoder

# Inequalities

So far, we only test equalities. What about inequalities?

## Inequalities in MIPS

beg and bne only tested equalities

```
if ( i == j )Assignment Project Exam Help$s2 label1 bne $s1 $s2 label1 https://powcoder.com
```

#### Add WeChat powcoder

We need to test <, <=, >, >=

```
if ( i < j )
if ( i <= j )
if ( i >= j )
if ( i >= j )
```

## Inequalities in MIPS: slt

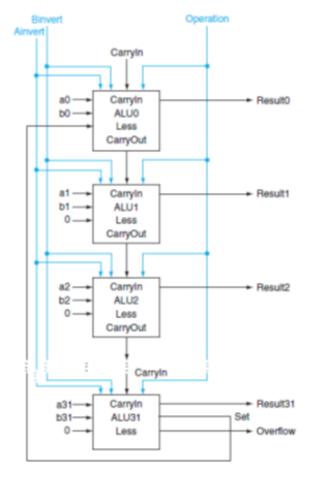

#### Syntax:

```
slt reg1 reg2 reg3 Exam Help
```

- -Compare reg2 and reg3
- -Place the result in regi

Add WeChat powcoder

```
// HLL style
if ( reg2 < reg3 )
  reg1 = 1 ;
else
  reg1 = 0 ;</pre>
```

Remember "Set on Less Than" From ALU?

## Inequalities in MIPS: from goto to MIPS

```
Assignment Project Exam Help
```

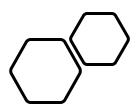

https://powcoder.com

```
Registers
$s0
$s1
$t0
```

```
# MIPS: branch to Less if $s0 < $s1
slt $t0, $s0, $s1 # if $s0<$s1 (q<h), $t0 = 1
bne $t0, $0, Less # branch if $t0 != 0
```

\$0 always contains 0

bne and beg often use it for comparison after an slt instruction.

## Inequalities in MIPS

We have now seen slt for what Exam Help about >, <= and >= ?

https://powcoder.com

Add WeChat powcoder

MIPS philosophy: **Simpler is Better!** Can we implement them using just slt and beq/bne

## Four Combinations of slt and beq/bne

```
slt $t0, $s0, $s1  # $t0 = 1 if $s0 < $s1 (g < h)
bne $t0, $0, Less  # if $t0 != 0, goto Less (g < h)
```

# slt \$t0, \$s0, \$s1 # \$t0 = 1 if \$s0 < \$s1 (g < h) beq \$t0, \$0, Geq #https://powcoder.comto Geq (g >= h)

Add WeChat powcoder

```
slt $t0, $s1, $s0  # $t0 = 1 if $s1 < $s0 (h > g) bne $t0, $0, Gtr  # if $t0 != 0 goto Gtr ( g > h )
```

```
slt $t0, $s1, $s0  # $t0 = 1 if $s1 < $s0 (g > h)
beq $t0, $0, Leq  # if $t0 == 0, goto Leq (g <= h)
```

## Pseudo-instructions for Inequalities

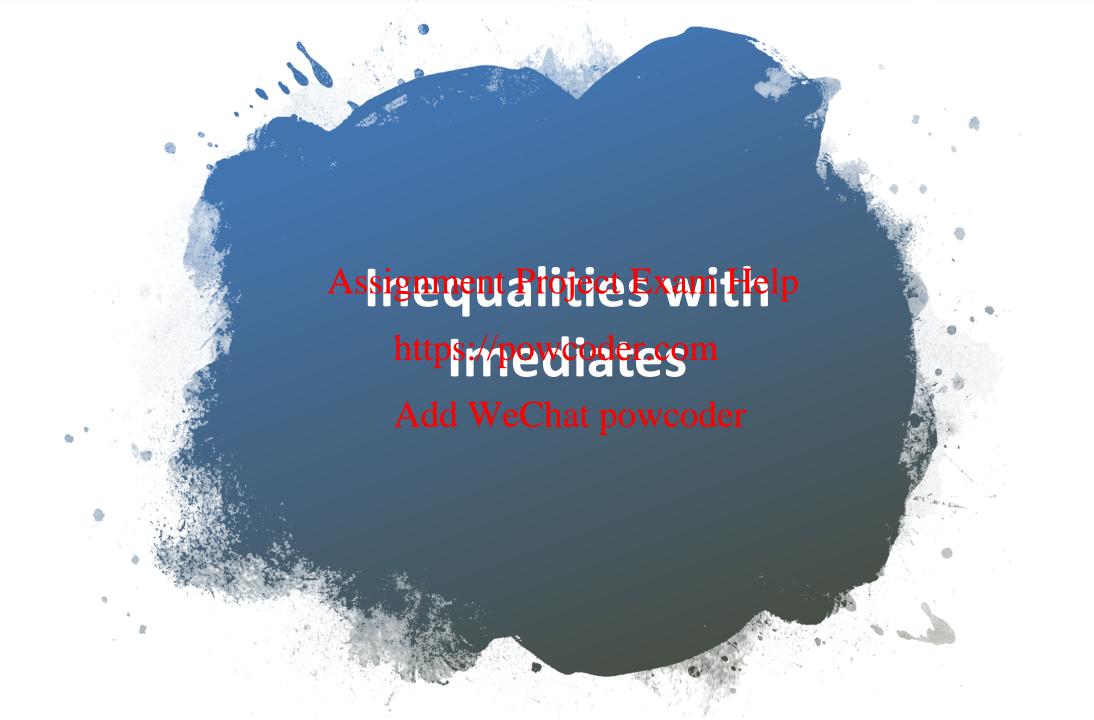

#### **Too complicated? Good News!**

MARS translates pseudo-instructions into MIPS instructions Assignment Project Exam Help

https://powcoder.com

#### PSEUDOINSTRUCTION SET WeChat powcoder

Aud Weenat boweouch			
NAME	MNEMONIC	OPERATION	
Branch Less Than	blt	if(R[rs] < R[rt]) PC = Label	
Branch Greater Than	bgt	if(R[rs]>R[rt]) PC = Label	
Branch Less Than or Equal	ble	$if(R[rs] \le R[rt]) PC = Label$	
Branch Greater Than or Equal	bge	if(R[rs]>=R[rt]) PC = Label	
Load Immediate	li	R[rd] = immediate	
Move	move	R[rd] = R[rs]	

## Immediates in Inequalities

Syntax:

```
slti Result Source Immediate
```

- Result = 1 if Source < Immediate, or 0 otherwise
- slti is the immediate version of slt

Add WeChat powcoder

```
goto Loop;
```

```
# MIPS
slti $t0, $s0, 1  # $t0 = 1 if $s0 < 1 beq $t0, $0, Loop # goto Loop if $t0 == 0
```

24

## Unsigned Immediates in Inequalities

Syntax:

```
Sltu Result Source1 Source2

Assignment Project Exam Help
Sltui Result Source Immediate
```

https://powcoder.com

 Set result to 1 or 0 depending on unsigned comparisons Add WeChat powcoder

```
# MIPS
slti $t0, $s0, $s1  # $t0 = 1 if $s0 < $s1
sltui $t0, $s0, 5  # $t0 = 1 if $s0 < 5
```

## Immediates in Inequalities

#### Review and More Information

- High-level languages
  - Conditional statement: if-else, switch Assignment Project Exam Help - Loop: while, do-while, for
- MIPS uses conditional branches:
  - Equality: beq, Add, WeChat powcoder
  - Inequality: slt, slti, sltu, sltiu
  - Jump: j
